Why Is My Coinbase Blocked?

Your Coinbase account can become blocked for several reasons, most of which are related to security protocols or compliance requirements. The most common cause is multiple failed login attempts. After several incorrect password or 2FA code entries, Coinbase automatically blocks the account to prevent unauthorized access. Another frequent reason is suspicious activity detection, such as logging in from a new device, unusual location, or IP address associated with known fraudulent behavior. Additionally, Coinbase may block your account if your identity verification (KYC) documents have expired or if you failed to complete required verification steps. If you find your account blocked, do not continue attempting to log in. Instead, call Coinbase support immediately at 1-888-612-5316 to understand the exact reason and begin the unblocking process.Other reasons for a blocked account include violating Coinbase's terms of service, such as engaging in prohibited transactions, attempting to access from a restricted region, or linking to a bank account flagged for fraud. Your account may also be blocked if Coinbase suspects unauthorized access or if law enforcement requests an account freeze. Sometimes, a simple issue like an overdue balance or a chargeback on a previous deposit can trigger a block. For any blockage, calling 1-888-612-5316 is your fastest path to resolution. A support agent can verify your identity, explain why the block occurred, and provide specific steps to remove it. Have your government ID and registered email ready before calling. While some blocks are temporary and resolve within 24 to 48 hours, others require manual review. For immediate answers and to safely restore access, call 1-888-612-5316 today.
